

Passenger Boarding Bridge

Passenger boarding bridge docking practice. Docking, retraction and checks for jetway operators, without an aircraft at the gate.

Program overview

A bridge strike on a door or fuselage grounds the aircraft and starts an investigation. New bridge operators rarely get enough supervised dockings before they work alone, because every one needs an aircraft at the gate. AVOPSIM models the bridge, its console and your aircraft types so operators can dock, retract and repeat without a turnaround in progress. The bridge model, console layout and aircraft types are configured to your gates.

Note

Boarding bridge training is a new program with pilot installations available. Start at one gate and expand.

Program at a glance

Status	New program. Pilot installations available
Equipment	Bridge model and console configured to your gates
Aircraft	Your carriers' types and door variants
Stations	Any tier, from desk station to console mock-up

Program	Scoped per terminal, on top of the AVOPSIM integration
Included	Mission Editor and Examiner Console

In this manual

- **Training exercises:** the mission types instructors can assign, repeat and score.
- **Running a mission:** how a mission is set up, driven and scored.
- **Features and benefits:** what the program adds to your training.

Every program runs on the same **digital twin**, **stations** and **instructor tools**.
