

Snow Removal

Snow Removal

Plows, brooms and blowers on your own runways and aprons, in the weather you choose.

Program overview

Winter equipment is the hardest fleet to train on. It is only used for part of the year, the combinations are long, and the conditions that matter are the ones you cannot schedule. AVOPSIM reproduces your winter units with their specialist controls on your runways and taxiways, with snow, ice, fog and night set per mission, so recurrent training happens in September rather than during the first event.

Program at a glance

Status	Subscription program, on top of the AVOPSIM integration
Vehicles	Plow and broom units, blowers and large tractors, modeled to your fleet
Environment	Your airfield in snow, ice, fog and night
Stations	Driving station or full cab with vehicle-specific controls
Missions	Clearing scenarios in the Mission Editor
Season	Any month of the year

In this manual

- **Training exercises:** the mission types instructors can assign, repeat and score.
- **Running a mission:** how a mission is set up, driven and scored.
- **Features and benefits:** what the program adds to your training.

Every program runs on the same **digital twin**, **stations** and **instructor tools**.
